

Are you tired of living in pain?

Curavisc can help!

Benefits of Curavisc:

- Reduces OA pain¹
- Reduces difficulties associated with OA¹
- Composed of hyaluronic acid (HA), similar to that in natural synovial fluid, which provides viscoelastic properties for joints²
- Reduces use of oral anti-inflammatory treatments¹

In a large multicenter study, over 90% of patients experienced an improvement in OA symptoms, with:

- 32.3% reporting complete symptom relief
- 43.5% reporting clear improvement
- <1% reporting adverse events

¹Although the majority of patients in the study received Curavisc in the knee joint, other synovial joints were included in this study.

Curavisc®

Is Curavisc right for you? Ask your doctor today about incorporating Curavisc within your nonoperative OA treatment pathway.

Curavisc®

Get back to your everyday activities with Curavisc

Don't let your osteoarthritis (OA) stop you from doing **the things you love, with the ones you love**

Learn how **90%** of users experience a reduction in OA symptoms¹

For many, an OA diagnosis can be worrisome, with many patients questioning the impact OA can have on their daily life. Learn more about why nonoperative HA viscosupplementation treatments may be right for you!

What is HA?

HA is a molecule found naturally throughout the human body and is an important component of synovial fluid, a substance that lubricates joints.³

Synovial fluid enables joints to move easily and freely, while also absorbing shocks in joints that occur during activity. This fluid protects bones and other joint tissues from injury, and HA is diminished in joints affected by OA.³

How do HA treatments work?

Curavisc is injected directly into the joint. It is composed of HA, similar to the HA found in the synovial fluid in joints. Just like the HA in your joints, the HA in Curavisc provides viscoelastic protection for joints affected by OA.

Curavisc relieves OA pain, reducing joint stiffness, and reducing the need for oral anti-inflammatory treatments.^{1,2}

Curavisc can help reduce your OA pain, increase your mobility, and get you **back to your everyday activities!**

What is Curavisc?

Curavisc is a very well tolerated, non-operative OA treatment, which also helps patients reduce their use of oral anti-inflammatory treatments.¹

Designed as a 3- to 5- injection regimen, Curavisc is indicated for the treatment of pain and disturbed function in degenerative and traumatic disease of the joints. It is approved for use in large joints, such as the knee, hip, and shoulder.²

Effective OA treatment, simple formula, powerful results

- Prefilled syringe with 20 mg/2 mL sodium hyaluronate
- 3- to 5-injection regimen
- Highly purified
- Bio-fermented, non-avian
